

Fidelis Cybersecurity Overview

Creating a world where attackers have no place left to hide.

The world's most sensitive data is too exposed. Too vulnerable. Too naked. At Fidelis, we protect that data by identifying and removing attackers no matter where they are hiding on your network and endpoints. Yes, others claim it. They do so routinely. But Fidelis goes beyond buzzwords. We live up to our claims and we don't take "no" for an answer.

The Problem We Solve Is Well Known

Every day security teams face well-funded adversaries. Inspired by a range of motives, these attackers have a single mission — to steal intellectual property, customer information and sabotage critical infrastructure. Fidelis prevents attackers from achieving this mission.

Our Customers Are Well Known

Forty percent of the world's most valuable brands trust Fidelis to secure their most critical assets.¹ Our customers include hundreds of organizations including:

- The world's largest technology company
- The largest life insurance company in the United States
- The world's largest software company
- The United States Department of Defense

But attackers don't discriminate based on size. That's why our customers also include a 250-person financial services firm in the U.S. Midwest, a 500-person clean energy manufacturer, hospitals, universities and companies of all types.

The Difference — Passion and Performance, Not Promises

The daily reality our customers face isn't an abstraction or a PowerPoint to us. It's what we live every day. Here's how we make it possible for our customers to succeed.

- **Network + Endpoint + Mobile:** We leave attackers no place to hide by detecting attackers on your network across all ports and protocols. Then, we pursue them out to the endpoints where your data lives.
- **Detect Attacks Others Miss:** Other solutions look for malware and call it quits. We keep going. We can detect the full array of attackers' tools and tactics. Let us prove it to you.
- **See Attacks in the Past:** The past is the present because most attacks aren't detected until days or months after they occur. We capture rich metadata from the network and endpoints so you can link new intelligence to past events.
- **Pivot from Detection to Investigation:** Too much information is as dangerous as not enough. We don't make work for you with a deluge of alerts. We save you time by enabling you to move from alert to investigation with a single click, within a single solution.
- **Visibility Across the Attack Lifecycle:** Find and stop attackers at every stage. With Fidelis you can see attackers moving laterally, staging data and more.

Key Facts

Company

- Founded 2002
- 320+ employees
- 40% annual growth

Solutions

- Fidelis Endpoint™
- Fidelis Network™
- Incident Response
- Security Consulting

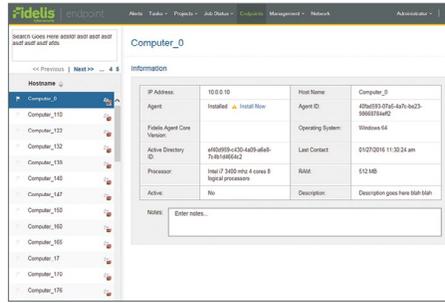

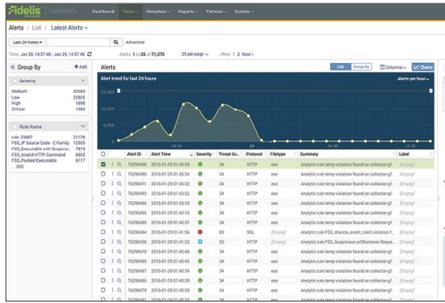

Management

- Peter George
President & CEO
- David Macey
SVP, Worldwide Sales
- Kurt Bertone
Chief Technology Officer
- Michael Buratowski
VP, Services
- Richard Darer
Chief Financial Officer
- Michael Evans
Chief Marketing Officer
- Brian Karney
SVP, Products
- Jerry Mancini
VP, Engineering

Fidelis Products — Built to Go Deep

Attackers hide their exploits deep inside your network, email and endpoints. Fidelis digs as deep as attackers hide. Our products enable organizations to reduce the time it takes to detect and resolve incidents, prevent data theft and stop attackers at every stage of the attack lifecycle.

Fidelis Network™

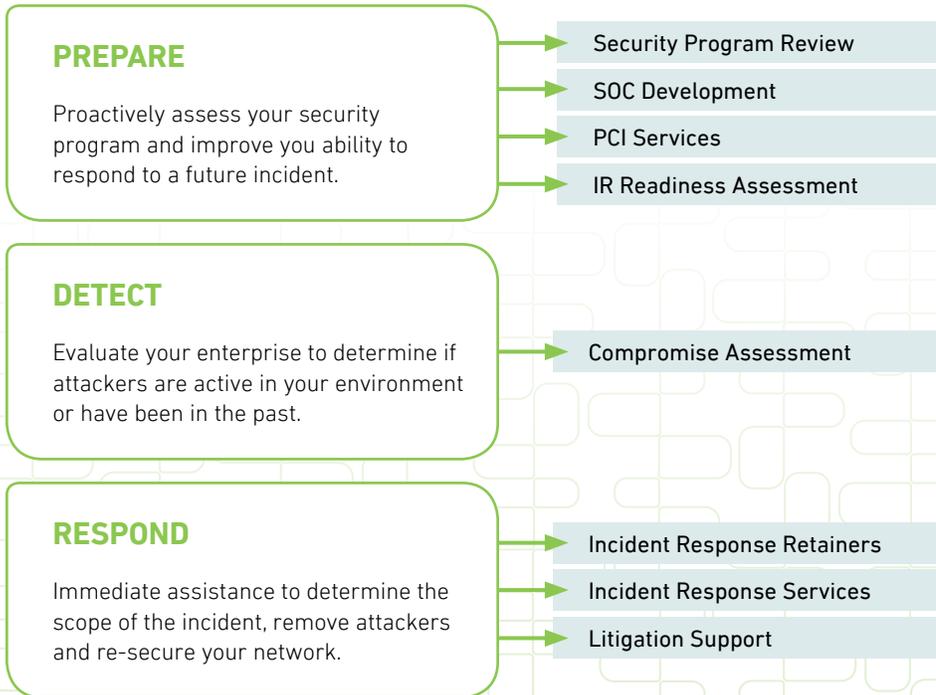

With Fidelis Network, analysts can quickly detect attacks, investigate them, reconstruct attacker activity and prevent data theft at every stage of an attack.

Fidelis Endpoint™

Automate your response to security incidents by getting the visibility and context required to identify and stop attacks as they are unfolding.

Security Consulting

Our consulting team has decades of intensive, hands-on experience helping organizations prepare for and respond to critical security incidents of all kinds. We offer a comprehensive portfolio of services that include proactive assessments and incident response.

Highlights

Products

- Detect advanced attacks others miss
- Reduce the time to detect and resolve incidents
- Correlate seemingly unrelated network activity and behavior
- Prevent data theft
- Improve analyst efficiency
- Enable hunting on the network and endpoints
- Implement SOC-like capabilities for smaller teams

Security Consulting

- Incident responders to high-profile breaches
- Experts in the tools and tactics of advanced attackers
- We know what works and what fails based on our first-hand experience responding to high profile security incidents over the past decade
- Certified PCI Forensic Investigator
- Experience responding to over 3,500 cases
- Developed the world's first security operation center (SOC)

"With Fidelis we are 60% more efficient in identifying compromises. We reduced response-related costs by 17% and are able to recover 50% faster from incidents."

– CISO, Financial Services Firm
