

Retina Enterprise Vulnerability Management Solutions

New and Updated Features

BeyondTrust [Retina enterprise vulnerability management solutions](#) provide security professionals with vulnerability assessment and risk analysis in context. Retina enables teams to proactively identify security exposures, analyze business impact, and plan and conduct remediation across network, web, mobile, cloud and virtual infrastructures, and communicate that risk to operations and compliance teams to reduce risk. Key capabilities include:

- Results-driven reporting and analytics that provide relevant and actionable data to multiple stakeholders throughout the organization
- Enterprise-class scalability, flexibility and performance from software and appliances with the industry's simplest licensing model
- Zero-gap coverage of all devices enterprise-wide, including network, web, mobile, cloud and virtual infrastructure
- A unified solutions platform addressing all phases of vulnerability management – from assessment and remediation, to endpoint protection and privileged account management

Retina CS version 5.8 add several features that further enhance scanning efficiency and visibility.

New Feature Highlights

PowerBroker Password Safe Integration

Automating the Use of Protected Privileged Credentials

Authenticated vulnerability scanning is more accurate and provides greater insights than unauthenticated scans. However, authenticated scans require the use of privileged credentials, which can often be continuously and anonymously changed for their protection. Additionally, network security best practices suggest regular scans of systems, requiring automation. How

can organizations both protect privileged credentials while making them automatically available for vulnerability scanning?

Retina CS 5.8 together with PowerBroker Password Safe provides a secure and easy solution. Once activated, Retina CS can acquire privileged credentials from PowerBroker Password Safe on demand - just prior to executing a vulnerability assessment – eliminating the pain experienced in trying to manually maintain lists of service account credentials. For security reasons, PowerBroker Password Safe controls the length of time that Retina CS can use these privileged credentials and remains the single repository for managing them.

Clarity Dashboard in HTML 5

Greater Visibility into Advanced Threats

BeyondInsight Clarity 5.8, available at no cost for Retina CS customers, contains a new interactive threat analytics dashboard and event viewer that quickly allows organizations to identify threats by asset, user and application. Events are prioritized by threat level and categorized for instant viewing by any of the attributes that represent a danger to the environment. This new user interface also marks the beginning of BeyondInsight's journey toward a complete HTML 5 conversion and joins PowerBroker Password Safe and PowerBroker Management Suite with a next generation user interface that scales from mobile phones, to tablets and desktops.

Clarity Dashboard Highlights

- Quickly identify any event by risk and trigger used to drive the analytics engine
- Group threats by BeyondTrust module, applications, or users to identify the highest risk events from vulnerability management to privileged account security
- Instantly change the palette and color scheme of the interface to support illumination in any environment and maintain Section 508 compliance
- Sort and filter events by any collected field to isolate outliers and frequent offenders by risk and activity
- Analyze third party vulnerability data from Qualys, Rapid 7, Tenable, or McAfee using BeyondTrust's patent pending analytics

McAfee Vulnerability Manager (MVM) Integration

In October Intel Security announced the end of life (EOL) for McAfee Vulnerability Manager (MVM). This means that Intel will no longer provide vulnerability updates for its product, putting organizations at risk from new and emerging threats. All current MVM customers should select a new vulnerability management solution that provides both a seamless migration of their historical vulnerability data and the ability to see that data in a whole new light.

With Retina CS 5.8, MVM customers can safely and easily export their existing vulnerability data directly to Retina CS. In addition, Retina CS gives current MVM users the ability to centralize all their scan data for prioritization, reporting and advanced threat analytics. Lastly, MVM customers will now have the exclusive opportunity to combine their asset and user intelligence to achieve a level of security visibility and control not possible until now.

For details on how to migrate MVM data to Retina, start here:

Customer Portal – New Ideas

Please be sure to engage with us using our new ‘Ideas’ function on the customer portal. ‘Ideas’ is a way to exchange, compare and vote on product ideas outside of the regular ticket enhancement process. In this open discussion forum, you can raise, discuss and vote on ideas; and when an idea reaches a certain popularity status, BT takes action. BeyondTrust is committed to innovation, and some of our best product features come from customers just like you.

To share your ideas, please visit our customer portal at:

About BeyondTrust

BeyondTrust® is a global cyber security company that believes preventing data breaches requires the right visibility to enable control over internal and external risks.

We give you the visibility to confidently reduce risks and the control to take proactive, informed action against data breach threats. And because threats can come from anywhere, we built a [platform](#) that unifies the most effective technologies for addressing both internal and external risk: [Privileged Account Management](#) and [Vulnerability Management](#). Our solutions grow with your needs, making sure you maintain control no matter where your organization goes.

BeyondTrust's security solutions are trusted by over 4,000 customers worldwide, including over half of the Fortune 100. To learn more about BeyondTrust, please visit www.beyondtrust.com.
