

# PowerBroker Management Suite

## Version 4.1

### New and Updated Features

BeyondTrust [PowerBroker Management Suite](#) provides centralized real-time change auditing for Active Directory, File Servers, Exchange, SQL and NetApp, the ability to restore Active Directory objects or attributes, and helps to establish and enforce entitlements across the Windows infrastructure. Through simpler administration, IT organizations can mitigate the risks of unwanted changes and better understand user activity to meet compliance requirements. With PowerBroker Management Suite, customers can:

- Audit the who, what, where and when of changes in Active Directory, Group Policy, Exchange, File Systems and SQL, and alert to those changes, providing real-time visibility to address potential compliance concerns
- Provide rollback and restore of any Active Directory changes or deletions, and backup and restore of Group Policy, protecting the business from downtime
- Deliver entitlement reporting, ensuring that users have access to the resources – and only those resources – they need to do their jobs
- Centralize distributed audit data and extend throughout the Microsoft infrastructure, providing more capabilities than native tools and a unified view of changes across the environment

PowerBroker Management Suite includes modules for the following systems:

#### **Auditing**

- [PowerBroker Auditor for Active Directory](#)
- [PowerBroker Auditor for File Systems](#)
- [PowerBroker Auditor for Exchange](#)
- [PowerBroker Auditor for SQL](#)

#### **Recovery**

- [PowerBroker Recovery for Active Directory](#)

#### **Entitlement Reporting**

- [PowerBroker Privilege Explorer for Active Directory and File Systems](#)

## New Feature Highlights

### Advanced GPO Auditing for PowerBroker Identity Services and PowerBroker for Windows Customers Maximizes the Value of Auditing Investments

Customers of [PowerBroker Identity Services](#) have long benefited from the built-in auditing capability provided by PowerBroker Auditor for Active Directory – specifically, for Unix attributes like UID, GID, login shell, gecos, and home directory. With the release of PowerBroker Management Suite version 4.1, that level of auditing has been enhanced to now also include auditing of GPO settings. As before, this capability is provided to PowerBroker Identity Services Enterprise customers at no additional charge.

New in version 4.1, PowerBroker Management Suite now audits GPO settings for [PowerBroker for Windows](#) customers as well. Customers driving least privilege updates via Group Policy will gain immediate visibility over all changes made to GPO setting at no additional cost.

Each of these use cases demonstrates the value of integrating products to provide greater visibility to reduce risk, and maximize the value of existing auditing investments.

### Support for Agents Running as Local System Securely Streamlines Auditing

Performing audits often require the use of a credentialed service account. This requirement can quickly become cumbersome for administrators as the number of audited systems increases. With version 4.1, PowerBroker Management Suite solves this problem by leveraging the local system account to run an audit. Both the management server and agents can be deployed in this manner. Having this capability means that administrators no longer need to manage other credentials to perform and audit, ensuring security and speeding audit results.

*PowerBroker Management Suite provides comprehensive auditing and recovery capabilities across complex Windows environments.*

## About BeyondTrust

BeyondTrust® is a global security company that believes preventing data breaches requires the right visibility to enable control over internal and external risks.

We give you the visibility to confidently reduce risks and the control to take proactive, informed action against data breach threats. And because threats can come from anywhere, we built a [platform](#) that unifies the most effective technologies for addressing both internal and external risk: [Privileged Account Management](#) and [Vulnerability Management](#). Our solutions grow with your needs, making sure you maintain control no matter where your organization goes.

BeyondTrust's security solutions are trusted by over 4,000 customers worldwide, including over half of the Fortune 100. To learn more about BeyondTrust, please visit [www.beyondtrust.com](http://www.beyondtrust.com).
