

# TrustCall

A convenient and cost-effective secure-voice solution for smartphones

It's estimated that more than 890 million smartphones are currently in use in government and commercial environments. While these tools greatly enhance productivity and convenience, they are susceptible to the same voice security vulnerabilities as any other mobile devices - a concern that is particularly relevant given recent reports on the security of the global system for communication (GSM) encryption codes. Though secure voice solutions exist, they have traditionally been expensive, difficult to acquire, cumbersome to operate and easily recognizable.

## The Solution

Ultra Electronics AEP offers a secure voice solution for smartphones that is discreet, easy-to-use and cost-effective. TrustCall uses a proprietary hardened encryption module called TrustChip® to create a differentiating cyber security solution. With TrustCall, users can have seamless voice protection whenever and wherever they need to place a sensitive call. And it can be deployed on a client's network or in a hosted environment while providing a central platform to manage, activate and terminate secure communications in near real-time.

## TrustCall Advantage

TrustCall quickly and seamlessly integrates into the client's environment without the need for advanced training or custom handsets. TrustCall also costs less than other options and it can be easily removed and reinstalled into other compatible smartphones, as needed, making it extremely portable and convenient.

## How it Works

Once TrustCall is installed, all a user needs to do to place a secure call is to select the contact from the device address book, select the "Place Secure Call" option and press "send." TrustCall does the rest.

## Rapid Deployment

TrustCall can be installed in the client environment in one day. Deployment and management is delivered through the management platform, TrustCenter. TrustCenter provides the user with complete control, including easy-to-configure access control and enhanced security capabilities for the TrustCall solution.
