

# TrustCenter

Enterprise crypto management system

## The Threat

Globally, commercial espionage and intellectual property theft are increasing at alarming rates. Today, the leading path of these attacks is via smartphones - voice, text and data. The theft of data and the 'hijacking' or eavesdropping of conversations has resulted in corporate financial losses, intellectual property theft, breaches of national security and virus exploits within sensitive networks.

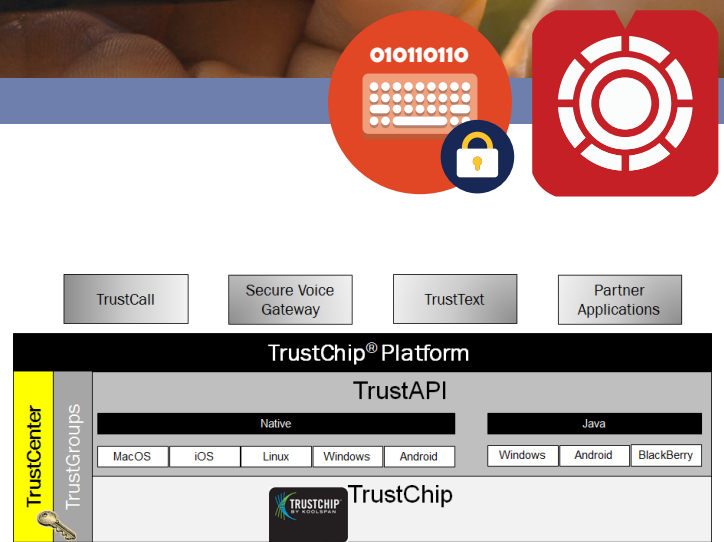

## The Solution

Ultra Electronics AEP offers the complete solution by solving these problems via a patented technology, the core of which is the TrustChip® 'security engine'. TrustChip® comes in a microSD form factor that is tamper resistant and contains the management, encryption, and authentication process.

AEP has TrustCenter, the security management system that provides the ability to centrally manage secure end-to-end mobile communications for every member in a trusted network. TrustCenter provides all of the tools and services necessary to manage the TrustChip® security processors throughout the business. TrustCenter enables smartphones to receive updated TrustGroup information and other policy data. Once configured, the TrustCenter typically requires minimal administrator intervention.

## TrustCenter Key Features:

- Includes a web-based application, accessible via a browser over the network.
- Allows for simple, secure, remote management to organisations TrustChip®, TrustGroup security associations, users and their connected devices.
- Provides outward-facing services that allow for secure, remote "over the air" management of TrustChip®
- Includes a device-based application that handles the connected device end of communications.

## Enterprise and Carrier Ready

The AEP TrustCenter scales from small business deployments through large scale enterprises all the way to carrier grade managed service deployments.
